

# Health recommendations

## For a safe vaping

March 2020

### Rule #1:

After contact with a potentially infected surface, wash your hands and do not touch your face.

### Maximum survival time on plastics

\*Varies with temperature, humidity, etc.

### Rule #4:

Never let someone else use your equipment for vaping.

### Rule #5:

When you are not using your equipment, place it in a place that limits contact with another person.

### Rule #2:

Clean all of your equipment regularly with a cloth impregnated with alcohol.

### Rule #3:

Remember to regularly disinfect the mouthpiece (Drip Tip) with hydroalcoholic gel, wipes or, if necessary, liquid soap.

### IMPORTANT:

If the virus is found on a surface, the number of infectious viral particles declines over time, reducing the risk of getting infected by touching it.
